CHINATOWN

ZONING UPDATE

DECEMBER 1989

BOSTON
PUBLIC
LIBRARY

TO: CHINATOWN-SOUTH COVE NEIGHBORHOOD COUNCIL

FROM: STEPHEN COYLE, BOSTON REDEVELOPMENT AUTHORITY

DATE: DECEMBER 11, 1989

RE: PROGRESS UPDATE

CHINATOWN COMMUNITY MASTER PLAN AND ZONING PLAN

The presentation of the final draft Chinatown Community Plan and Chinatown District Zoning Plan to the neighborhood council for review is scheduled for January 16, followed by the BRA hearing on January 25.

The Chinatown Zoning Map and Summary enclosed here for your information outline the zoning regulations for Building Height and Density that are the results of over a year of discussion and consultation with the neighborhood council, community advocates, and institutional representatives. The Executive Summary outlines the planning framework and the common visions that have evolved from the community-based master plan initiative that was launched by the neighborhood council and the city in 1987.

PARCEL A/B/C

Requests for intermediate funding for Parcels A/B/C will be submitted to the BRA Board for approval on Thursday, December 14. In addition to a $15,000 planning grant for Parcel C to complete the predevelopment planning tasks, a $25,000 interest free loan for architectural services and a $10,000 interest free loan for development consultant services will also be requested for Parcel B for preparing the submissions to RDAL and SHARP in January and February respectively. The BRA will also undertake the development of an economic model for Parcel A/B/C with the respective teams to finalize the financial plan.

NEW ENGLAND MEDICAL CENTER MASTER PLAN

The approval of the New England Medical Center Master Plan is scheduled around January and February, contingent upon the approval of the Transportation Access Plan, and a Community Benefit Plan of adequate specificity for the benefit provisions.

CASTLE SQUARE GARAGE

A BRA Board meeting on the project summary is scheduled for December 28 to move the various issues of major concerns to the tenants and the Chinatown community to a satisfactory closure.

With your continued participation, we look forward to accomplishing these and other projects with primary significance to Chinatown in the coming New Year.

EXECUTIVE SUMMARY:
COMMUNITY GROWTH AND NEIGHBORHOOD CONSERVATION

For the Chinatown community, the celebration of a unique cultural heritage and tradition has to be supported with the possibility and the promise of change for a better future. As Chinatown approaches the 1990s, the historic immigrant neighborhood is faced with a set of new opportunities and resources that are critical to the realization of its future growth and development.

These opportunities and resources have resulted from the community advocacy efforts and the city policies that guided 1980s downtown development boom to create housing and economic benefits for the neighborhoods. The Chinatown community's aspiration for change and action is further urged on by the demise of the Combat Zone along with the planned resurgence of the nearby Midtown Cultural District as a cultural hub and the South Station area as a technological center.

To build and improve the future for its rapidly growing community, Chinatown should act on these immediate opportunities. However, potential changes also prompt an uncertainty about the long-term viability of the immigrant neighborhood now faced with the upscale transformation of its adjacent districts. The proposed new developments also cause concerns for the environmental quality of this densely populated residential and commercial neighborhood.

The challenge confronting Chinatown as a community of Asian immigrants is not simply to protect the existing residential and business sectors, but also to broaden its housing and economic base. At the same time, the community wants to reinforce its neighborhood as a historic anchor for immigrant families, small businesses, and community services.

The task confronting Chinatown as a strategically located center city neighborhood is not simply to renovate or rebuild its dismal physical environment. The challenge is also to enhance a unique cultural heritage that is embodied in its ~~buildings~~, streets, and the lively pedestrian environment, while still enabling a progressive transformation of the physical appearance of the neighborhood.

In short, the goal of the comprehensive development plan for Chinatown is to generate a social, economic, and physical environment that supports and nurtures

community growth without undermining the quality of life or destroying the singular identity and legacies of the neighborhood.

Chinatown seeks to protect the existing land base from downtown encroachment on its northern and westerns edges, from institutional expansion in its midst, and from transportation construction at its eastern and southern boundaries. In addition, Chinatown looks to garner additional land resources for future community growth and development. Aside from reclaiming the Gateway subdistrict area that was lost to the construction of interstate highway, Chinatown seeks to solidify its expansion into the Midtown Cultural District, a process that has been spearheaded by Asian small businesses and entrepreneurs.

The physical planning and development of Chinatown can become a catalyst for creating opportunities in affordable housing, good jobs, community services, economic diversification, transportation access, and civic amenities for recreation and cultural and arts programming.

The community-based comprehensive development plan for Chinatown necessarily goes beyond the physical distribution of land uses, the manipulation of urban form, and the management of traffic and transportation infrastructure. The social and economic consequences are the driving force behind the district's grassroots planning. Proactive community participation, public education, capacity building, and community empowerment are the keys to the long-term viability of the Chinatown community, and have become an integral part of the community-based planning process.

The Chinatown Community Plan adopted with the Zoning Plan will mark the first time in the history of Chinatown when the community needs and aspirations have guided the city's blueprint for the future growth and development of the neighborhood.

The long-term success of the plan will depend on the support of a host of public, private, and community entities. Public actions and creative interventions have to be enhanced with community initiative and private ingenuity. The continued growth and prosperity of Chinatown as a historic residential neighborhood and a cultural, business, and service center can ultimately enrich Boston as a city of neighborhoods that thrives on its diverse heritage.

DRAFT CHINATOWN ZONING SUMMARY: HEIGHT AND DENSITY REGULATIONS

AS OF RIGHT HEIGHT AND DENSITY (FAR*) REGULATIONS

Residential Chinatown	**80'-100'/FAR 4-6**
Commercial Chinatown	**80'-100'/FAR 7**
Institutional	**80'-125'/FAR 6-8**

In order to enhance the scale and character of the residential, commercial, and institutional areas in Chinatown while allowing for some flexibility where it is appropriate, a range of as of right height and density regulations are proposed. Building heights in these areas will be limited to 80'(about 6 stories). However, upon design review, building heights can reach 100'(about 8 stories) in the Residential and Commercial Chinatown areas, or 125' in the Institutional area. Upon design review, building densities can increase from FAR 4 to 6 in the Residential Chinatown area, from FAR 6 to 8 in the Institutional area .

PROTECTION AREAS

Liberty Tree Block	**65'-80'/FAR 6-7**
Beach-Knapp Street	**65'-80'/FAR 6-7**
Historic Chinatown	**65'-80'/FAR 6-7**

To protect the historical distinction and/or the environmental amenities that make these areas in Chinatown a unique commercial and residential district, building heights and densities will be limited to 65' (about 5 stories) and FAR 6. Upon design review, building height and densities can reach 80' (about 6 stories) and FAR 7.

The Liberty Tree District and the Beach/Knapp Street District are listed on the National Register of Historic Places. Each of these two districts is comprised of six 19th century buildings with a variety of styles, ranging from High Victorian Gothic to utilitarian buildings. The Historic Chinatown area essentially retains the tight-knit urban scale that reflects the neighborhood's origin dated from the 19th century. Most of the area has been developed on 20'x 70' lots originally divided for rowhouses. Most of the streets are between 25' to 40' wide, including sidewalks. More than 90 percent of the existing buildings are 65' high or less, and all are under 80'.

* **FAR represents the ratio of floor area to the size of the building site.**

SPECIAL STUDY AREAS

Tyler Street	**80'-125'/FAR 6-8**
Turnpike Air-Rights	**250'/FAR 6**
Chinatown Gateway/ South Bay Interchange	**300'/FAR 10**

The zoning plan will propose to establish three Special Study Areas in Chinatown for which a comprehensive planning study will be undertaken to address a set of complex issues having major consequences for the future land use in Chinatown. Permanent zoning regulations for building height, density, and use will be proposed at the end of the study.

All three special study areas are expected to face major changes resulting from the planned transportation constructions which are still evolving, such as the Central Artery Reconstruction effecting Hudson Street and Kneeland Street, the Orange Line Replacement Service impacting the Massachusetts Turnpike and Washington Street area, and the new ramps off Marginal Road and Herald Street proposed by the City to relieve neighborhood streets from regional traffic generated by the Central Artery project.

The comprehensive planning study for the Tyler Street Special Study Area will recommend specific measures to balance and integrate institutional development, housing, community services, and businesses.

The comprehensive planning study for the Chinatown Gateway area will recommend specific measures to balance the different needs for housing resources, economic diversification, entrepreneurial development, and open space.

The comprehensive planning study for the Turnpike Air-Rights Special Study Area Plan will recommend specific measures to expand the existing residential areas, community services, and open space that will benefit the abutting communities, including Chinatown, South End, and Bay Village.

PLANNED DEVELOPMENT AREA

PDA I	**Residential Chinatown**	**175'/FAR 6**
PDA II	**Turnpike Air-Rights**	**250'/FAR 6**
PDA III	**Chinatown Gateway/ South Bay Interchange**	**300'/FAR 10**

To allow desirable growth benefiting the Chinatown community, a Planned Development Area (PDA) can be designated in the Residential Chinatown, the Turnpike Air-Rights, and the Chinatown Gateway areas. Each proposed project must adhere to a development plan which is approved only after public hearings by the BRA and the Zoning Commission. Public benefits being considered include affordable housing, community services, open space, economic opportunities, and substantial rehabilitation of historic theatres.

Upon approval, a project within a PDA can increase its building height and density to 175' and FAR 6 in PDA I, Residential Chinatown; 250' and FAR 6 in PDA II, Turnpike Air-Rights; 300' and FAR 10 in PDA III, Chinatown Gateway/South Bay Interchange.

Both PDA in the Turnpike Air-Rights area and the Chinatown Gateway area are also designated as Special Study Area to allow for continued planning analysis and refinements before permanent zoning regulations are recommended.

OPEN SPACE ZONE

Gateway Park (Parkland)
Tai-Tung Park (Urban Plaza)
Pagoda Park (Parkland)

To protect and expand public parks, recreation areas, and green spaces in Chinatown, three permanent open space zones are proposed: the Gateway Park in the Commercial Chinatown area, the Tai-Tung Park (116 Tyler Street) in the Residential Chinatown area, and the Pagoda Park in the Chinatown Gateway area.

Additional permanent open space zones could be designated as a result of the comprehensive planning study for the Tyler Street Special Study Area, the Chinatown Gateway Special Study Area, and the Turnpike Air-Rights Special Study Area.

URBAN DESIGN AND ENVIRONMENTAL CONTROL

12/19/8

Overview

Chinatown is a small downtown neighborhood that measures about 4 blocks east to west and about 7 blocks north to south. Most of the neighborhood is comprised of 20' x 70' lots originally divided for rowhouses a century ago. Over one half of the buildings in Chinatown are four stories or less, and nearly all of them are under 100' high. A few exceptions exist at the housing towers and institutional buildings erected since the 1970s, obliterating the tight-knit urban texture that reflects the neighborhood's origin dated from the 19th century.

The land-locked neighborhood is composed of three subareas--business, residential, and institutional--and framed by the Midtown Cultural District, the South Station Economic Development Area, the Leather District, and the South End. This compact urban core is traversed by two sets of traffic networks. In addition to local neighborhood streets, major city carriers and regional arteries converge in and around the neighborhood.

Chinatown enjoys the convenience provided by its central location in the transportation network and its proximity to the civic and business hub of the city. However, Chinatown is fragmented and isolated by heavy traffic in its midst or circulating at its borders, while suffering a diminished environmental quality. The diverse uses and users that converge on the limited land area add to the richness and the vitality of Chinatown, but at the same time result in conflict and confusion. The modestly scaled structures in Chinatown oftentimes are easily obscured and overwhelmed by the institutional buildings in its midst or the commercial buildings at its border.

Overall Goal: Enhance the rich diversity and vitality of the Chinatown built environment while reinforcing its image, visibility, and environmental quality.

Objectives:

1 Reinforce neighborhood image.

Enhance a unique neighborhood image that reflects the historic and cultural heritage of Chinatown to establish Chinatown in the downtown landscape.

Shaping and upgrading the image of Chinatown has to go beyond the multi-lingual store signs and commercialized cultural props such as the pagoda-topped phone booths.

Individual expressions by proprietors and residents should be encouraged. In addition, creative adaptation, representation, or preservation of various historic and cultural legacies should be explored in the design and the management of every aspect of the environment, from buildings and interiors of public space to streets and open space.

2 Improve visibility and orientation.

Improve the visibility and orientation of Chinatown from the adjacent districts, especially from the Midtown Cultural District, the South Station area, and the Leather District.

Orientation can be improved with street signs and maps that better connect Chinatown with the downtown, or more expressive transit station design and directory systems. Other effective measures include improving or creating critical visual corridors and intersections linking Chinatown with the surrounding districts visually and physically. These can be enhanced with the judicious placement of cultural and community landmarks and signatures.

3 Enhance a neighborhood-wide community network.

Buildings, streets, and open space in Chinatown should accommodate a continuous community presence throughout the commercial, the residential, and the institutional cores.

A street-level community network need to be enhanced to ensure a convenient and safe pedestrian circulation network connecting various activity nodes, open space, transit points, and parking; ground-floor uses oriented to Chinatown residents, shoppers, patrons, and service clients; and designs and furnishings reinforcing a community presence.

4 Enforce architectural transition and interface sensitive to the neighborhood character.

At the sensitive edges or sites in Chinatown where different uses or districts converge, building designs should response to the predominant commercial and residential character and identity of Chinatown.

Aside from avoiding visual and sensory intrusions through sensitive handling of building scale, height, massing, and facade treatment, creative space planning and siting should further seek to strengthen the nearby residential

and commercial environment in Chinatown. This is important not only for the institutional structures and the residential and commercial mixed-use buildings in its midst but also for the commercial buildings bordering Chinatown.

5 Upgrade environmental quality.

The residential and commercial environment in Chinatown should be free of excessive shadows, downdrafts, and other discomforting and unhealthy offense on the residents, workers, shoppers, and visitors in this densely populated and heavily used neighborhood.

....

Guidelines for Urban Design and Environmental Control

OPEN SPACE

Overview

Chinatown is the most densely populated neighborhood in Boston and its housing units have the highest overcrowding rate in the city. The neighborhood also has more families and elderly residents. The limited number of indoor recreation facilities in Chinatown further aggravate the demand for open space. Nevertheless, Chinatown offers the least amount of open space to its residents. Greenery is scarce. Access to the nearby Boston Common and the Public Garden has long been threatened by the the presence of the Combat Zone.

About 0.3 acres of open space are available within the existing Chinatown proper, plus another 2.5 acres provided by the Pagoda Park in the Gateway site and the Eliot Norton Park in the adjacent Bay Village. In total, open space averages less than 0.6 acre per 1000 Chinatown residents, compared to 1.2 acres for the South End. In addition, these facilities currently used by the Chinatown residents and visitors suffer from inconvenient location, poor security, inadequate maintenance, or limited space.

Ironically, the open asphalt parking lots scattered around Chinatown have provided some temporary visual relief in the densely built neighborhood. With few other alternative available, these parking lots along with the congested streets and the crowded sidewalks have also become make-shift ball parks, tot lots, or adventurous playgrounds in Chinatown.

Overall Goal: **Create a variety of open space and public realm to serve the divergent social and recreational needs of Chinatown's residents, workers, shoppers, and visitors.**

Objectives:

1 **Increase accessible, safe, and comfortably furnished open space in the neighborhood.**

The location, design, and management of the various open space facilities should provide accessibility, safety, and comfort for Chinatown users.

Open space that encourages community use should be created at critical intersections, entry points, and along important paths and streets in Chinatown. These should not be cut off by traffic and should be within

close walking distance of the residential and commercial cores in Chinatown. Aside from convenient location, the design and management of open space facilities should ensure adequate safety and comfort. These community-oriented open space settings should be incorporated in any large scale institutional projects and commercial/ development in Chinatown.

community

2 Extend the open space network.

Extend the network of green open spaces from Chinatown to the nearby Midtown Cultural District, the Boston Common, the Public Garden, and further along the South West Corridor. ≥ future C.A. linear park

An extended open space network will enable Chinatown residents and workers to expand their realm of outdoor recreation and relaxation. Improvement in pedestrian safety and park security can increase the use of open space in the nearby Midtown Cultural District and Bay Village. Through public information and outreach geared towards the immigrants, this open space network can be extended to the many open space resources along the Southwest Corridor that are easily accessible by the Orange Line, such as the Arnold Arboretum and the Franklin Park.

3 Explore alternative green places.

Alternative forms of green places should be amply and creatively provided throughout the public environment in Chinatown.

Plantings and vegetation should not be limited to parks, gardens, playgrounds, or tot lots but extended to the street environment in Chinatown as well as indoor public places. Simple measures such as window displays, hanging greens, and sidewalk planters should be encouraged. Where appropriate, roof-top gardens, canopied streets, green arcades, and other possibilities should be explored to increase the enjoyment of green places by residents and workers in their daily life.

4 Create a neighborhood common and enhance community identity through the open space.

A neighborhood common should be created to reinforce the sense of community that is shared by the residents and workers in Chinatown with the shoppers and visitors from the Asian community at large.

A neighborhood common for Chinatown can serve as a focal

point in the community and provide a central stage for a rich of community functions, celebrations, and festivals that unfold with the seasons. Through creative design and management, a neighborhood common can take the form of a street, a park, or a combination of both. In addition, open space design in general, ranging from layout, architecctural detailing and furnishings to vegetation, should seek to reflect the unique cultural heritage of the community. Parcel C or Posner parcel along Oak St

5 Enhance versatility of design and management.

Versatile design and management should be utilized to increase the capacity of the limited open space and recreation facilities in Chinatown.

Open space in Chinatown has to address the varying needs of elderly folks, young children, odd-hour shift-workers, large-volume shoppers, and weekend visitors. Versatile designs such as sitting walls and tree-fences should be explored when possible to increase the efficiency of limited space. Flexible management of privately held or institutionally owned outdoor space and recreation facilities should be encouraged to make possible or increase community uses and ameliorate the demand on open space.

December 20, 1989

Dear Members and Friends of the Chinatown Community:

Enclosed* here for your information and comment is an update on the progress of the Chinatown Community Plan and the Chinatown Zoning Plan. The Executive Summary presents to you the intent of the final Chinatown Community Plan to enhance the continued growth of the Chinatown community while enabling the conservation of this historic neighborhood with a unique cultural heritage. The Zoning Map and the accompanying Zoning Summary outline for you the proposed zoning regulations for Building Height and Density currently being considered.

Both the master plan and the zoning plan are the results of the joint planning initiative by the Chinatown-South Cove Neighborhood Council (CNC) and the city which was formally launched with the formation of the CNC Master Plan Committee and the four-part Chinatown Survey in July of 1987. On January 16 of the coming new year, the final draft Chinatown plan together with the final draft zoning provision will be presented to the neighborhood council for review. A public hearing on the plan and its zoning provision held by the BRA Board will be scheduled for January 25, followed by a period of public comment. The final adoption of the plan should take place in the early Spring of 1990. Prior to the CNC monthly meeting, a review with the CNC Land Use Committee is scheduled for January 10.

You will be pleased to learn that progress also has been made on the planned development of Parcels A, B, and C in the Oak Street and Washington Street section of Chinatown. The development is programed to produce 260 units of housing on Parcels A and B, about 60 percent of which will be affordable, and a community service component totaling about 90,000 square feet on the adjacent Parcel C which will help address the excess demands for special health care, service, and educational programs from the immigrant residents. To facilitate the orderly progress of this project of significant scale and complexity, the BRA Board has approved a planning grant to the Chinatown Community Center (CCC) to complete the predevelopment planning analysis of the project size, facility

* **Please note that the update package is not enclosed here for members who already received the same information at the December 11 CNC meeting.**

programming, and project financing for a first-class service facility. In addition, the Board also approved the Asian Community Development Corporation's request for a loan which will enable this new non-profit community-based corporation in Chinatown to proceed with its applications for state funds for the development of the much needed affordable rental units for large families on Parcel B. Meanwhile, the R3A Associates Limited Partnership, under the guidance of the Chinese Economic Development Council which has been active in housing development in Chinatown since the 1970s, plans to develop a mixture of affordable rental units and market rate condos on Parcel A which will increase the home ownership opportunity in Chinatown. In the coming months, an economic model for the development of Parcels A, B, and C will be designed to further refine the development program and financing plan ensuring the viability of this important housing creation project complete with the necessary service programs.

Over the course of two and a half years, the community-based master plan effort as well as the planned development of Parcels A, B, and C has drawn from and built on the expertise, the experience, and the insight of community advocates and concerned individuals from the housing, business, and service sectors of Chinatown. The leadership of the CNC members and its dedicated staff have been most invaluable, especially the commitment and hard work of Messrs. Bill Moy, Davis Woo, and George Joe to facilitate a deliberation process and forum open to all interested members from the Chinatown community at large.

As we move steadily towards the adoption of the master plan and its zoning provision and the realization of the Parcels A/B/C development, your continued participation will be essential. Again, thank you for your suggestions, comments, and warm support.

Sincerely,

TING

Ting-Fun Yeh
